

Identify the Issue

1. What is the injury-related problem or issue that you want to address?

Define the problem:

2. Who is experiencing this injury in your community?

3. When and where are the injuries happening?

4. What are the circumstances around the injury? How are they happening?

Planning for Prevention:

5. **Thinking about all of the circumstances around this type of injury, including when, where, and what is happening, what are ways this type of injury can be prevented?**

6. **Who is your target audience for these prevention activities? List your target audiences and what you want them to do (e.g., change behaviour, take action, make different decisions).**

7. **What are some ways that you can reach your target audience to educate them about the prevention activities?**

8. Identify the resources and partnerships that are already available and identify other resources and partnerships that may be needed for your prevention activities.

9. What barriers exist to adopting the recommended prevention activities?

10. What are some ways that these barriers can be overcome?

For more information on Child Injury Prevention, including why children are at risk, influencing public policy, and evaluating your program, download the Child Injury Prevention Programming and Action Guide at <https://skprevention.ca/resource-catalogue/safety/child-injury-prevention-programming-and-action-guide/>.
